

SS-20

[PAT.P.]

Features

• Ortho-consciously designed mouthpiece

The new mouthpiece, developed on the basis of ergonomic engineering, further enhances the comfort of bite, fit, and stability. Even with a light bite, a high level of stability is achieved, so there is no fatigue from long periods of usage.

• Light weight demand valve second stage

• Purge button

Lighter and smaller, the SS-20 combines a large discharge valve with a deflection tube and deflector to reduce exhaust resistance. The L.P. hose is yellow like the main unit to improve visibility.

• Left and right hose layout compatibility

• 33 inch long hose

• Visible yellow body and hose

Reusable mouthpiece cinch

REGULATORS

DUO-AIR ALTERNATE INFLATION REGULATOR

[PAT.P.]

IR-3

N/A in Europe

The IR-3 is a downstream backup regulator that also provides you with easy-to-operate buoyancy control. The Inflator Regulator is positioned at the end of the buoyancy compensator hose --the ideal location for quick, efficient use. Because you use it as your power inflator, you always know where it's located. Plus, the Inflator Regulator cuts down on hose clutter because you use the same hose to supply both the power inflator and the backup regulator.

Air balanced power inflator valve

• Combination of octopus regulator and power inflator
