[PAT.P.]

M-16

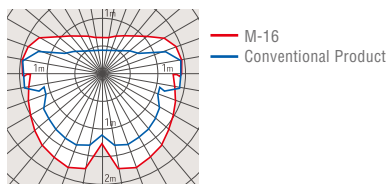

- Round edge skirt for superior seal and increased comfort
- 1-window design with wide field vision
- Five angle strap adjustor
- 3-D strap for ideal anatomical fit

Features

• 1-window design

This mask features a wide field-of-view design. It is also compact in size with a reduced medium sized skirt, while maintaining incredibly wide field-of-view.

• Round edge skirt

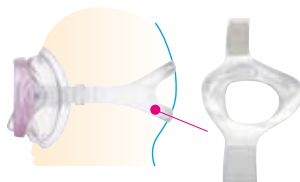

The M-16 features a round mold (patent pending), special cross-sectionally shaped skirt. The resulting soft fit suppresses pressure and reduces creasing left on the face. This "planar fit, instead of linear fit" silicone skirt maintains a great seal and unprecedented comfort.

• Five angle strap adjustor

The strap angles on both the left and right sides can be varied, and then secured with the adjustor. This enables the up/down and left/right pressure on the face to be delicately adjusted.

• 3-D strap

The M-16 employs a newly developed 3-D strap (patent pending) that snugly fits against the head's curvature for superior comfort and unprecedented fit.

3-D Strap for superior comfort

M-16QB

This design features a black silicone skirt and strap.
